

# iubenda's Consent

Recovery

# Feature

Boost your consent rate and  
streamline your website's user  
experience

# What is Consent Recovery?

iubenda offers a **feature** that helps you **retrieve consent** when users decline or block scripts on your site or app.

# Who is Consent Recovery for?

This feature is **for anyone who has an embedded element on their website or app** that gets blocked when users reject cookies.

(like a Google Map, a YouTube video, and even social media content from Facebook or Instagram).

# How does it work?

## Offer a seamless user experience →

Instead of showing gaps or malfunctioning elements, **it displays a clear notice**, offering users a chance to reconsider their choices.

## Maintain a high consent rate... →

With a second chance to present the consent dialogue, you have **more possibilities to turn users rejection into consent**.

## ...while staying transparent and compliant towards your visitors →

Clearly **inform** your audience regarding the use of cookies

**All scripts remain blocked** until the user modifies the cookie preferences

To enable the Consent Recovery feature or understand if it fits your need, **contact us**

As a **Bronze partner** of iubenda, we help you adapt your site.

**Write to us for more information**
